
Rear Brakes on 2006 Vento Phantera GT5

Posted by arleenco - 2008/04/21 15:47

Hi everyone

First post. About three weeks ago I purchased a brand new 2006 Vento Phantera GT5 which runs very well and took me from Williamsburg to Coney Island last Friday. As I brought it back to the garage after the big ride, though, I noticed the rear brake was sticking. Thank goodness it happened near the garage and not on the highway!

Anyway, does anyone know why this might have happened? I'm taking it in for service this week, but was wondering why that would happen after such a short time. I'm hoping it's something that I may be able to fix myself if it happens again. Thanks.
