
Stuttering

Posted by rendermatt - 2009/03/13 18:49

Please help, this problem is really driving me crazy.

My scooter will stutter completely randomly. It decides when it wants to respond to the throttle. Very frequently when accelerating or when going full speed it will choke up and stop accelerating for several seconds.

Work I've done:

- decarbonize muffler
- check & clean spark plug
- clean fuel filter
- clean air filter
- take snorkel off air filter
- replace spark plug
- clean carburetor & jets
- replace fuel filter

It still does the same thing, almost seems to be worse now. What could this be??

do you have any mods to your ped?
cause if you do its just a part of tuning it right.

Ped as in my scooter? If so then no, it has not been modified.

oh yea thats what i meant,
umm you can try checking your ignition coil or reeds?
